

# LANDSCAPER'S PLANTING MIX

In 2011 before the Rugby World Cup, Living Earth Landscapers' Planting Mix was selected as the mix for the raised planters around Eden Park. Great as a planting mix for massed groupings of NZ plants or in amenity areas, Landscapers' Planting Mix is a blend from our mixing pad on Puketutu Island, scraped after the products have been made. Once screened it is surprisingly consistent in its properties, with a density that is closer to soil in texture, Landscapers' Planting Mix has earned a justifiably good name amongst landscaping contractors for its suitability for bulk projects on a budget. And the Eden Park beds? – they look amazing 4 years after NZ won the last Cup there!

## PRODUCT SPECIFICATIONS

pH	7.7
Conductivity (mS cm <sup>-1</sup> )*	≤ 1.7
Germination score (out of 7)	≥ 6
Moisture	30% to 50%
Bulk density -wet wt basis (kg per m <sup>-3</sup> )	750 to 1100
* Analysed in a 1:1.5 water extraction	

## HANDLING PROCEDURE

When handling larger volumes, ensure stockpiles are covered to give protection against weather conditions.

## RECOMMENDED USE

- Use in raised garden beds and planting beds
- Ideal mix for establishing NZ and exotic mass plantings and amenity horticulture beds.

## INGREDIENTS

- ✓ Living Earth Organic Compost
- ✓ Bark Fines
- ✓ Quality Loam Topsoil

COMPOST BASED

REVIVES SOIL

## FREIGHTING & APPLYING

Approximately 28m<sup>3</sup> per truck & trailer. Plant directly into Landscapers' Planting Mix. Produced as a cost effective solution for large planter beds, re-vegetation plantings, streetscapes. Compact lightly.
